AMENDMENTS TO THE CLAIMS

Claims 1-13. (*Cancelled*)

Claim 14. (*Currently amended*) A concentrated composition suitable for use with impure water in preparing a dilute treatment composition having a viscosity of less than about 10cp for treating food at a basic pH by diluting with said impure water using from about 0.1% to about 5% of the concentrated composition, by weight of the dilute treatment composition, said concentrated composition comprising:

- (a) from about 0.5% to about 50% by weight of toxicologically-acceptable detergent surfactant selected from the group consisting of alkyl sulfates and C₈-C₁₄ soaps;
- (b) a basic buffer to provide a pH in said dilute treatment composition of from about 10.5 to about 13, but with low reserve alkalinity in said dilute composition to avoid damage to a human, the level of orthophosphate, when present, being from about 3% to about 60%, by weight of phosphoric acid equivalent;
- (c) from about 2% to about 20% by weight of a calcium ion sequestrant, which is sodium and/or potassium tripolyphosphate and/or ethylenediaminetetraacetate;
- (d) optionally, a toxicologically-acceptable preservative;
- (e) a toxicologically-acceptable suds suppressor; and
- (f) the balance comprising compatible, toxicologically-acceptable inert and/or minor ingredients, said composition being packaged in combination with usage instructions which instruct the user regarding dilution and timing of usage of said composition, as well as directing the user not to rinse the composition from the food to avoid possible recontamination, wherein said timing of usage comprises contacting said food with said dilute treatment composition for a period of time in excess of one half minute.

Claims 15-23. (*Cancelled*)
